The OU-3 information is listed on our database as a separate "site" - "*Des Moines TCE/North Plume*" - Site # 400.

It's located at;

<https://programs.iowadnr.gov/contaminatedsites/Site/Detail/400>

The Iowa DNR has sampled about every three years recently, 2009, 2012 and 2015
DMWW **does not** sample any of the wells associated with OU-3

Hylton, can you shed some light on this? I found the attached report from 2015, but didn't really see anything else in our electronic records system on OU3 monitoring over the last five years.

Subject: RE: Des Moines TCE Site FYR - Request for Documents

Tonya,

I have another documents request.

I need groundwater monitoring reports for OU3. The previous FYR report says the monitoring is conducted by the state of Iowa periodically. During the interviews at Titan's facility on August 3, it was stated that DMWW conducts the monitoring semiannually. And

the Interview Record I received back from Dico says that monitoring reports are submitted to the EPA, IDNR, and Des Moines Water Works monthly. So, I'm not sure who actually performs the monitoring/sampling of OU3 wells.

The previous FYR report states that seven (7) OU3 wells are monitored and specifically identifies NW-34 and NW-35. I can find no figure/drawing with these wells - not even the previous FYR report.

Following are the items we need for the FYR:

6. Monitoring reports showing OU3 analytical results, from whomever produces them, for the current FYR period
7. Figures/drawings showing the OU3 wells

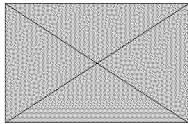

Thanks,

Fred
